

Cradle to Cradle

Cradle to Cradle Certified™

is a certification mark licensed by the Cradle to Cradle Products Innovation Institute. The Cradle to Cradle (C2C) Certified Products Standard is an approach to designing and manufacturing products which considers finished materials to be technical nutrients. Products are not merely efficient, but are in essence waste-free. They should be able to be recycled and manufactured into new, first-quality products again and again—circulating perpetually in a closed-loop cycle, without using or wasting other resources (such as water).

Features of our certified products:

- Endlessly recyclable and reclaimable.
- UV-resistant.
- Antifungal.
- Low measurable emission of VOCs.
- Flame retardant.
- PVC free.

Cradle to Cradle Certified products offer:

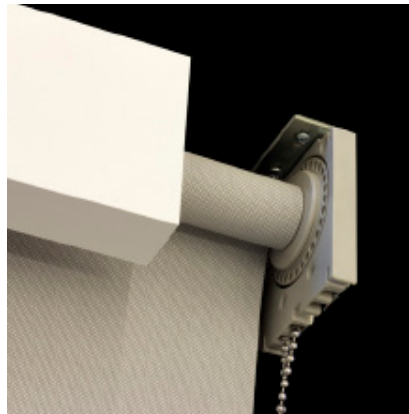

- Qualification for points in U.S. Green Building Council's LEED® Rating System.
- Opportunities to be specified for a growing number of building projects.
- Special recognition in the architecture and interior-design communities.

MechoSystems has three Cradle to Cradle Certified Bronze products:

EcoVeil® Shadecloth

The first environmentally certified product of its kind. This industry-recognized shadecloth is ideal for projects where sustainable materials and energy efficiency are desired. EcoVeil is offered in several styles, patterns, and densities.

Mecho®/5 Manual Shade with EcoVeil

The first complete window-covering system to be Cradle to Cradle Certified Bronze. It features the biggest shade size range that a manual-drive system can lift before motorization is required. It is ideal for projects with wide-width windows.

UrbanShade® Manual System with EcoVeil

A low-profile window-covering system. The cost-effective option is easy to install and is smoothly operated.
