

New single-piece chain retainer (universal mounting).

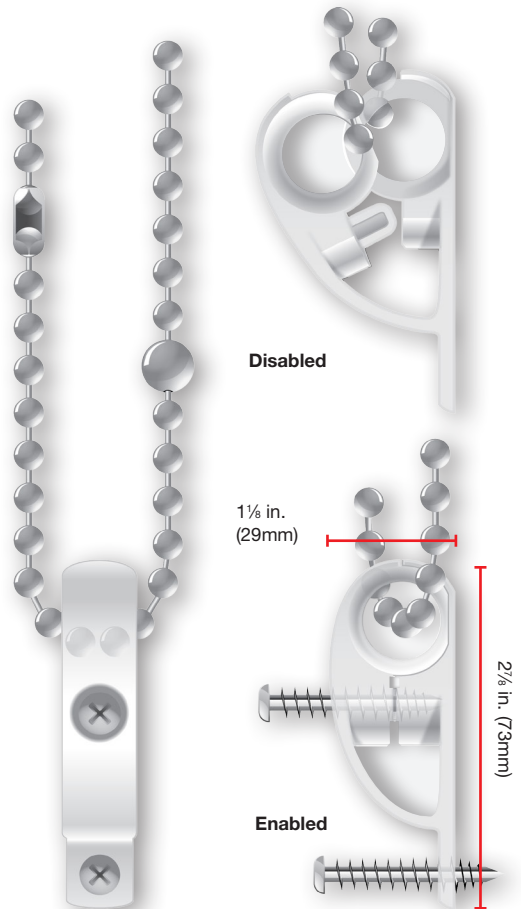

Our Mecho®/5 and UrbanShade® chain-operated manual roller shades will ship with a new chain retainer as of January 4, 2016. This new single-piece design meets the latest requirements specified by ANSI/WCMA A100.1-2014 publication for window-covering cord and bead chain tension devices as agreed to by the Consumer Product Safety Commission (CPSC) and the Window Covering Manufacturers Association (WCMA).

This new chain retainer:

- Features a single-piece design.
- Is ANSI/WCMA A100.1-2014 compliant.
- Has a transparent design to match virtually any décor.
- Is sill and wall mountable.
- Accepts stop and bumper beads for complete and smooth operation.

The single-piece chain retainer ships pre-installed on all Mecho/5 and UrbanShade assemblies in order to partially disable chain operation until properly mounted. It can be ordered separately for product retrofits or attic stock as a kit under part no. GEN3 PCLP KTCL. Special requests for the old chain retainer can be made by contacting Customer Service or placing an appropriate note on your order. For more information on the transition process, please visit mymechoshades.com.
